Short food supply chains (SFSCs) are an alternative to long globalised food chains and play an increasingly important role in food supply networks.

SFSCs are very varied in nature and practice and exist all over the world in a wide variety of forms, in both commercial and non-commercial settings.

SFSCs are increasingly taken into consideration by policy and decision makers in government, industry and civil society organisations.

Examples of SFSCs include box schemes, farmers’ markets, on-farm sales, consumer cooperatives, direct Internet sales, community supported agriculture, community gardening, Grow Your Own and wild food foraging.

“Short” can only be fully defined within each particular policy context.

Characteristics of short food supply chains

- „Short” refers to both physical and social distance.
- Social distance refers to the opportunity for the producer and the consumer (where they are not the same person) to interact and share information. There are no or very few intermediaries in SFSCs.
- Information exchanged includes details about the origin, production method and sustainability of the product, but also about the identity, values and ethics of both the producer and consumer.
- Physical distance covers the distance a product has travelled between points of production and sale. Its limitation varies and depends on each particular policy context and situation as well as consumer expectation.
- There is openness by the supplier about both the social and physical distance of the product.

Examples of policy areas in which SFSCs can be a useful tool

- Local and regional development
- Integrated food strategies (incl. urban and regional strategies)
- Public procurement
- Business development and entrepreneurship
- Food democracy

Examples of SFSCs include box schemes, farmers’ markets, on-farm sales, consumer cooperatives, direct Internet sales, community supported agriculture, community gardening, Grow Your Own and wild food foraging.
Short food supply chains (SFSCs) can act as a driver of change and a method to increase sustainability, trust, equality and growth in agricultural, food, business, social, health and rural policy areas.

**Short food supply chains can increase sustainability in all its dimensions**

- **Environmental**: Many SFSCs have minimised the use of fossil fuel or packaging, and/or use less polluting methods of production.
- **Health & wellbeing**: Some SFSCs have increased knowledge and concern about food amongst consumers and led to the adoption of healthier diets.
- **Social**: The direct relationship between producer and consumer has ensured fairness and trust in many SFSCs.
- **Economic**: SFSCs to which consumers are committed long-term have reduced economic uncertainties that result from varying production and sales volumes.

**Examples of how SFSCs have increased sustainability:**

- **Environmental**: Many SFSCs have minimised the use of fossil fuel or packaging, and/or use less polluting methods of production.
- **Health & wellbeing**: Some SFSCs have increased knowledge and concern about food amongst consumers and led to the adoption of healthier diets.
- **Social**: The direct relationship between producer and consumer has ensured fairness and trust in many SFSCs.
- **Economic**: SFSCs to which consumers are committed long-term have reduced economic uncertainties that result from varying production and sales volumes.

**Policy support mechanisms for short food supply chains**

- Flexible regulation (e.g. on hygiene)
- Local facilities (e.g. storage, processing)
- Financial and political support
- Research, knowledge, skills and training
